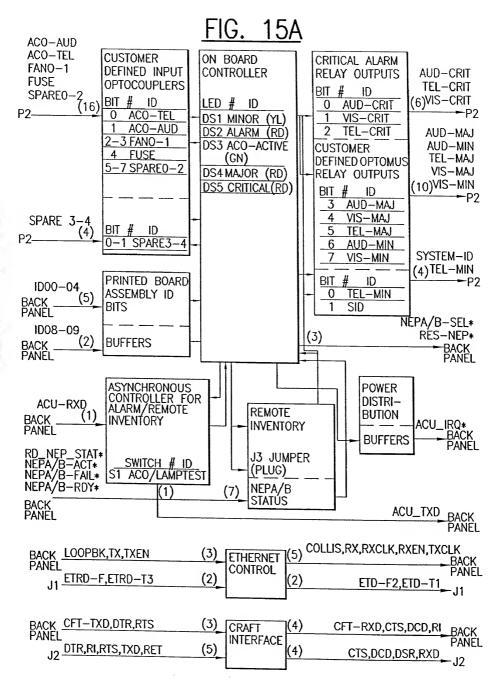

FIG. 15B

Function Description
Provides a central office alarm interface
Provides a telemetry alarm interface
Collects up to 2 rack fan alarms, 1 Top Rack Unit (TRU) fuse
alarm, 5 miscellaneous external alarms, 1 Alarm Cut-Off Audible
Unit (ACO_AU) alarm, and 1 ACO_Telemetry (ACO_TEL) alarm
Provides local craft terminal port
Provides an ethernet port (future option)
Provides a visual summary alarm display of rack minor, major,
and critical alarm conditions
Provides a local Alarm Cut-Off (ACO) for Central Office (CO)
alarms and a visual display of the ACO status
Provides a unit failure indicator
Provides a craft port for an asynchronous EIA-232-D function
available to the user via a female 9-pin subminiature D
connector on the front panel of the ACU
Handles input/output alarm information and generates alarm
status/indicators via relay contacts or optical switches and
Light Emitting Diodes (LEDs) for audible/visual/telemetry
Provides for a remote inventory function
Provides for Network Element Processor A (NEPA)/NEPB
active/standby arbitration (future option)
Provides for NEPA/NEPB reset function (future option)
Provides for Joint Test Access Group (JTAG)/boundary scan
testing

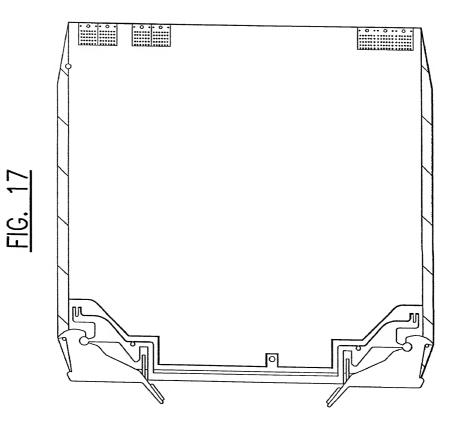

Note There is only one active craft port per ADSL system.

Note The backplane has 5 Identifier (ID) bits dedicated for slot information that are read to check for proper slot insertion (ie., each slot has a unique address).
